PRE-DEVELOPMENT FEASIBILITY

- **Image upload system** – Technologies used were not feasible
- **Hospital appointment software** – Lots of groundwork was required.
- **Parking System** – Due to inadequate parking area available, and the technology required was beyond our scope. So, the idea was dropped.
- **Health and wellness app** – Lot of groundwork was required, and project was too diverse.
- **Donation for the needy** – Website addressed a genuine issue and was feasible economically and technically.

PRE-DEVELOPMENT ABOUT THE PROJECT

- The project Audarya aims at creating a website where anyone can easily find a recipient for anything he/she/some organisation is willing to donate.
- Due to authentication and other related legal issues, recipients of donations will be the registered NGOs.
- Donate able items include books, stationary items, clothes and footwear.
- Donations can be made to NGOs serving peoples of all the different age groups.
- Stakeholders of the project include NGOs and their recipients, donors, and project team members.

DEVELOPMENT PHASE

SRS – REQUIREMENT GATHERING

- Background reading -
 - About types of NGOs
 - Registration process of any NGO
 - Things usually required by NGOs
- Interview – We asked NGOs about
 - The donations they receive and their frequency.
 - The frequency of individual donations.
 - How often do they fall short of commodities like clothes, books, stationary items, foot wears.
 - Their views on the project idea and any feature they would like to suggest.
- Survey – We took a survey amongst the students of IIITV which asked about –
 - The difficulties they face when willing to donate something
 - How often do they donate and to what organisations.
 - Are they willing to donate something that is left unused.
 - How useful the website will be for them.

DEVELOPMENT PHASE

SRS – REQUIREMENT ANALYSIS

Depending on the results obtained from requirements gathering, we concluded that –

- Individual donations are very rare with NGOs
- Very often, NGOs fall short of essential commodities like books, stationaries, clothes and footwear.
- Apart from receiving donations, NGOs were also willing to donate.
- Majority of the students were unable to find proper recipients for things they were willing to donate.
- Majority of the students were willing to donate and were ready to travel to NGOs to donate.
- Majority felt that the website will be helpful for them.
- We also received various suggestions about the features we should add.

DEVELOPMENT PHASE

SRS – REQUIREMENT SPECIFICATIONS

Depending upon the results obtained after requirement analysis, following specifications were made-

- The website should allow the users to find the NGOs nearest to them.
- NGOs should be able to notify registered users for anything they need.
- NGOs should also be able to donate to some other NGOs.
- Authenticity of the NGOs should be checked.
- The website should act as a mediator between the donor and the NGO.
- All the donation made should be logged by the administrator.

DEVELOPMENT PHASE

DESIGN

Front-end – Mockups were created using

- Wireframe.cc
- Moqups.com

Back-end –

- Relational diagram
- ER diagram

DEVELOPMENT PHASE

TECHNOLOGIES USED

Front-end

- HTML5
- CSS3
- Bootstrap
- Javascript

Back-end

- Javascript
- JQuery
- Ajax
- PHP
- MySql

Server –

- Apache

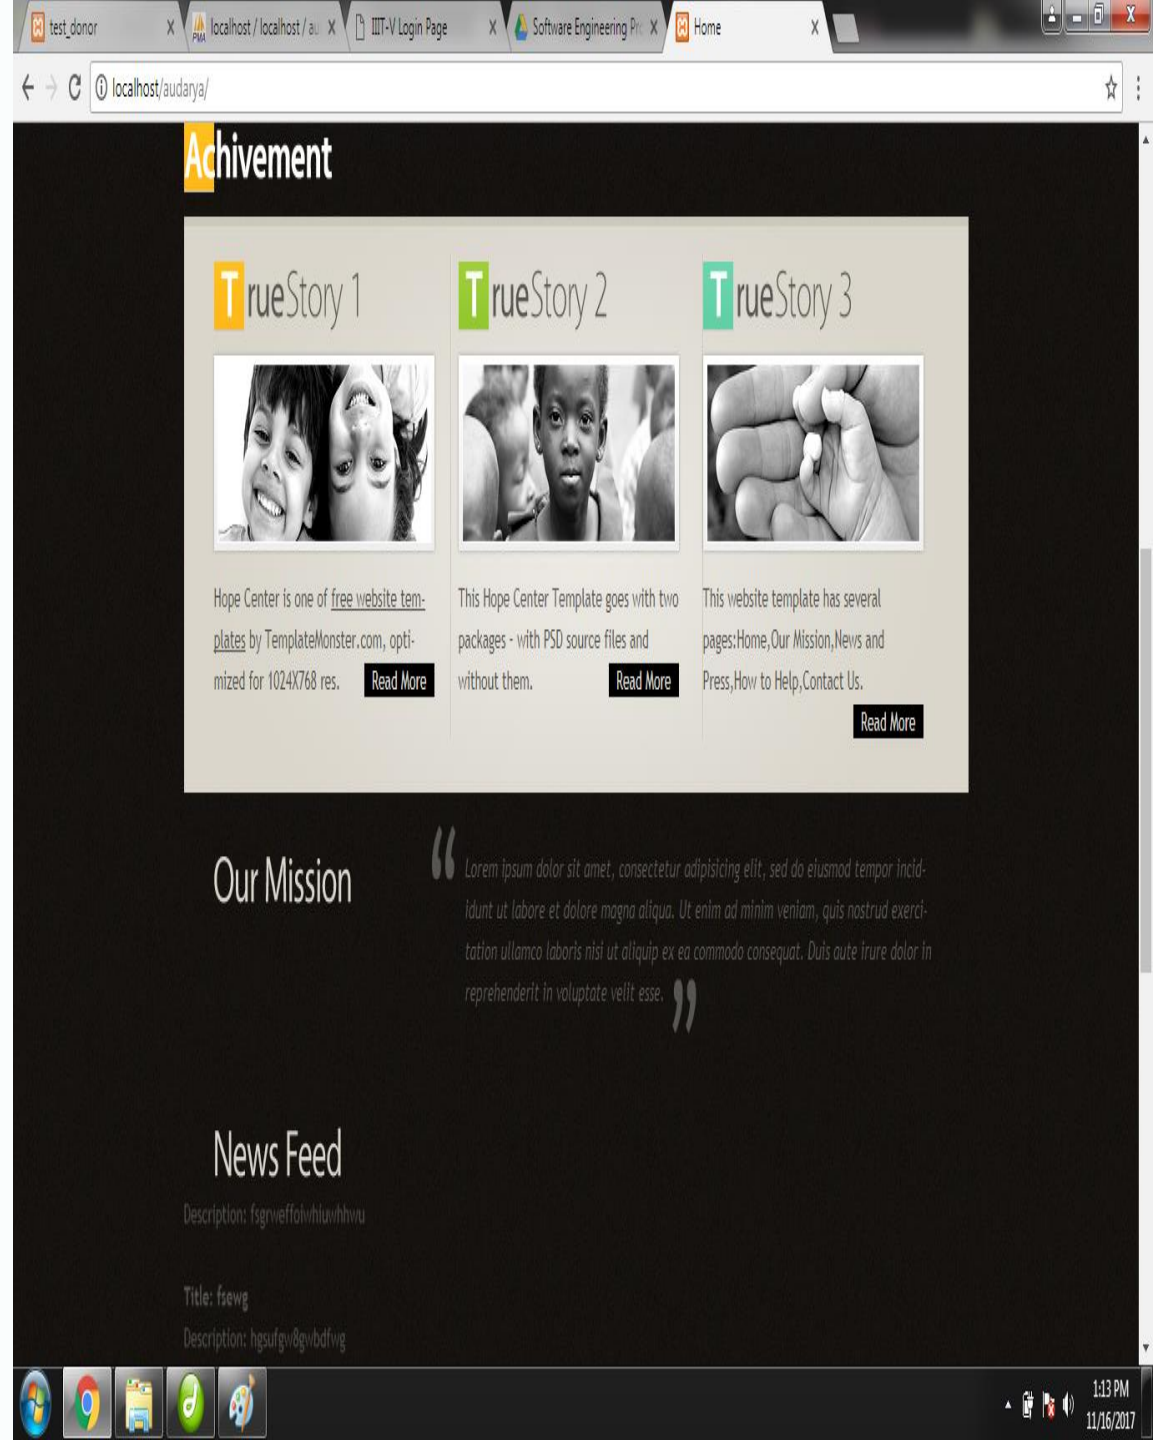

DEVELOPMENT PHASE

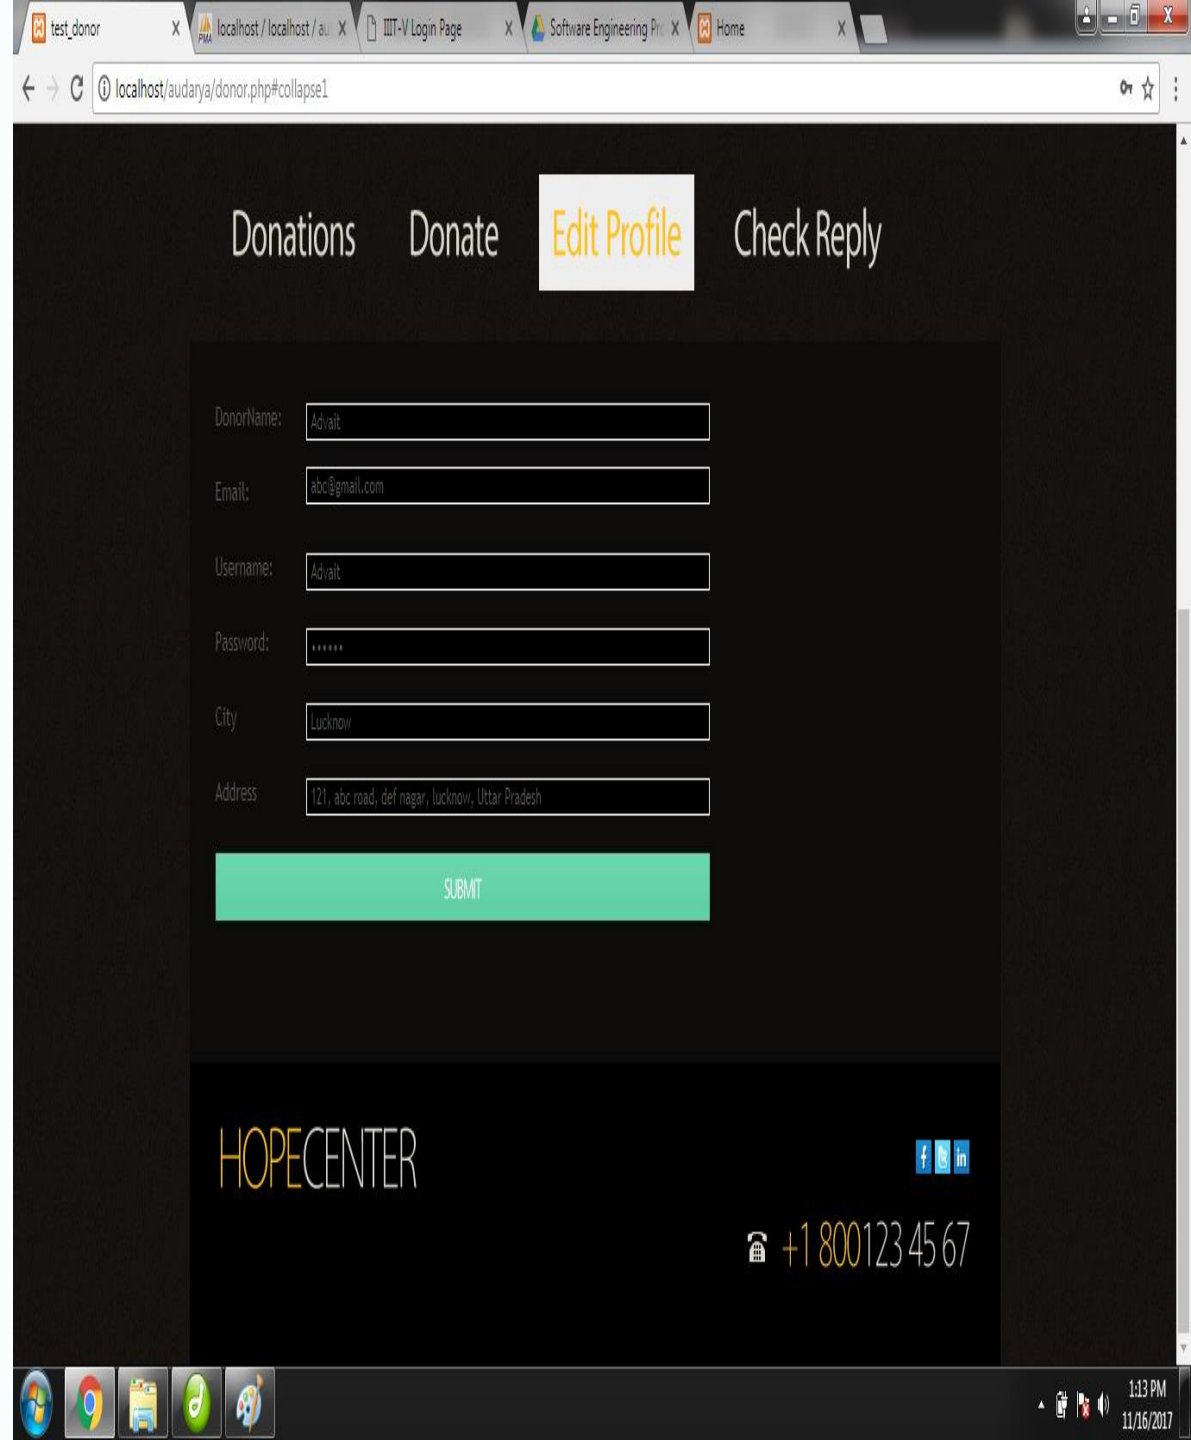

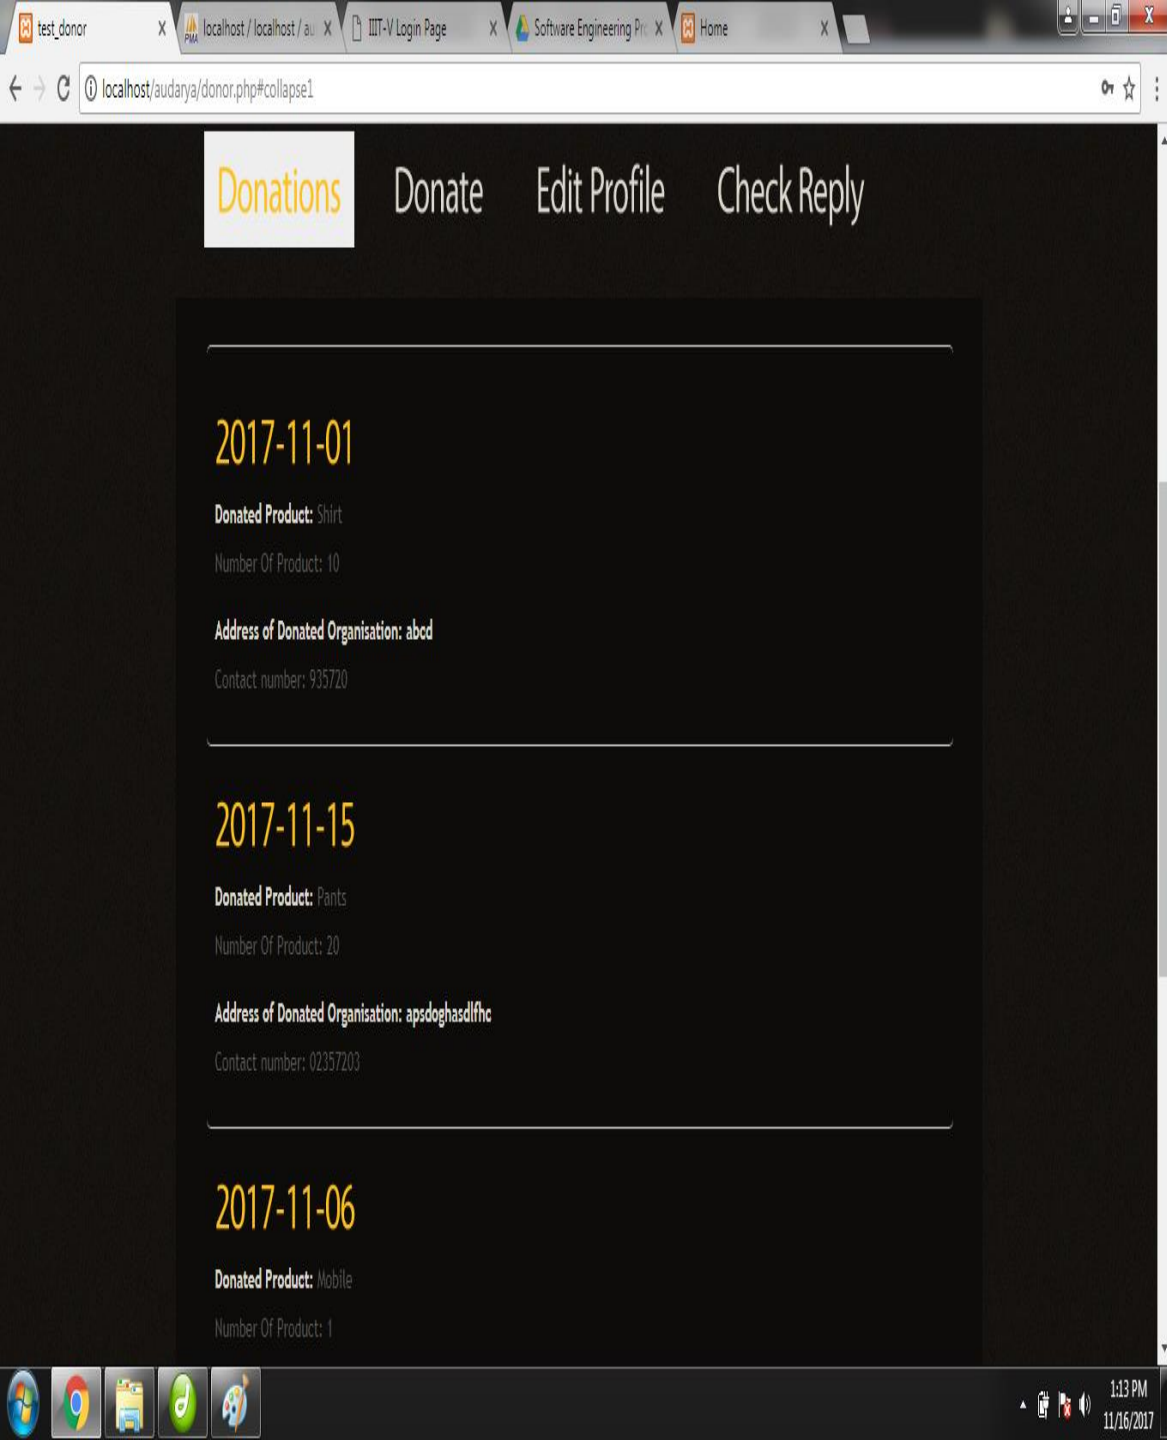

MAIN FEATURES

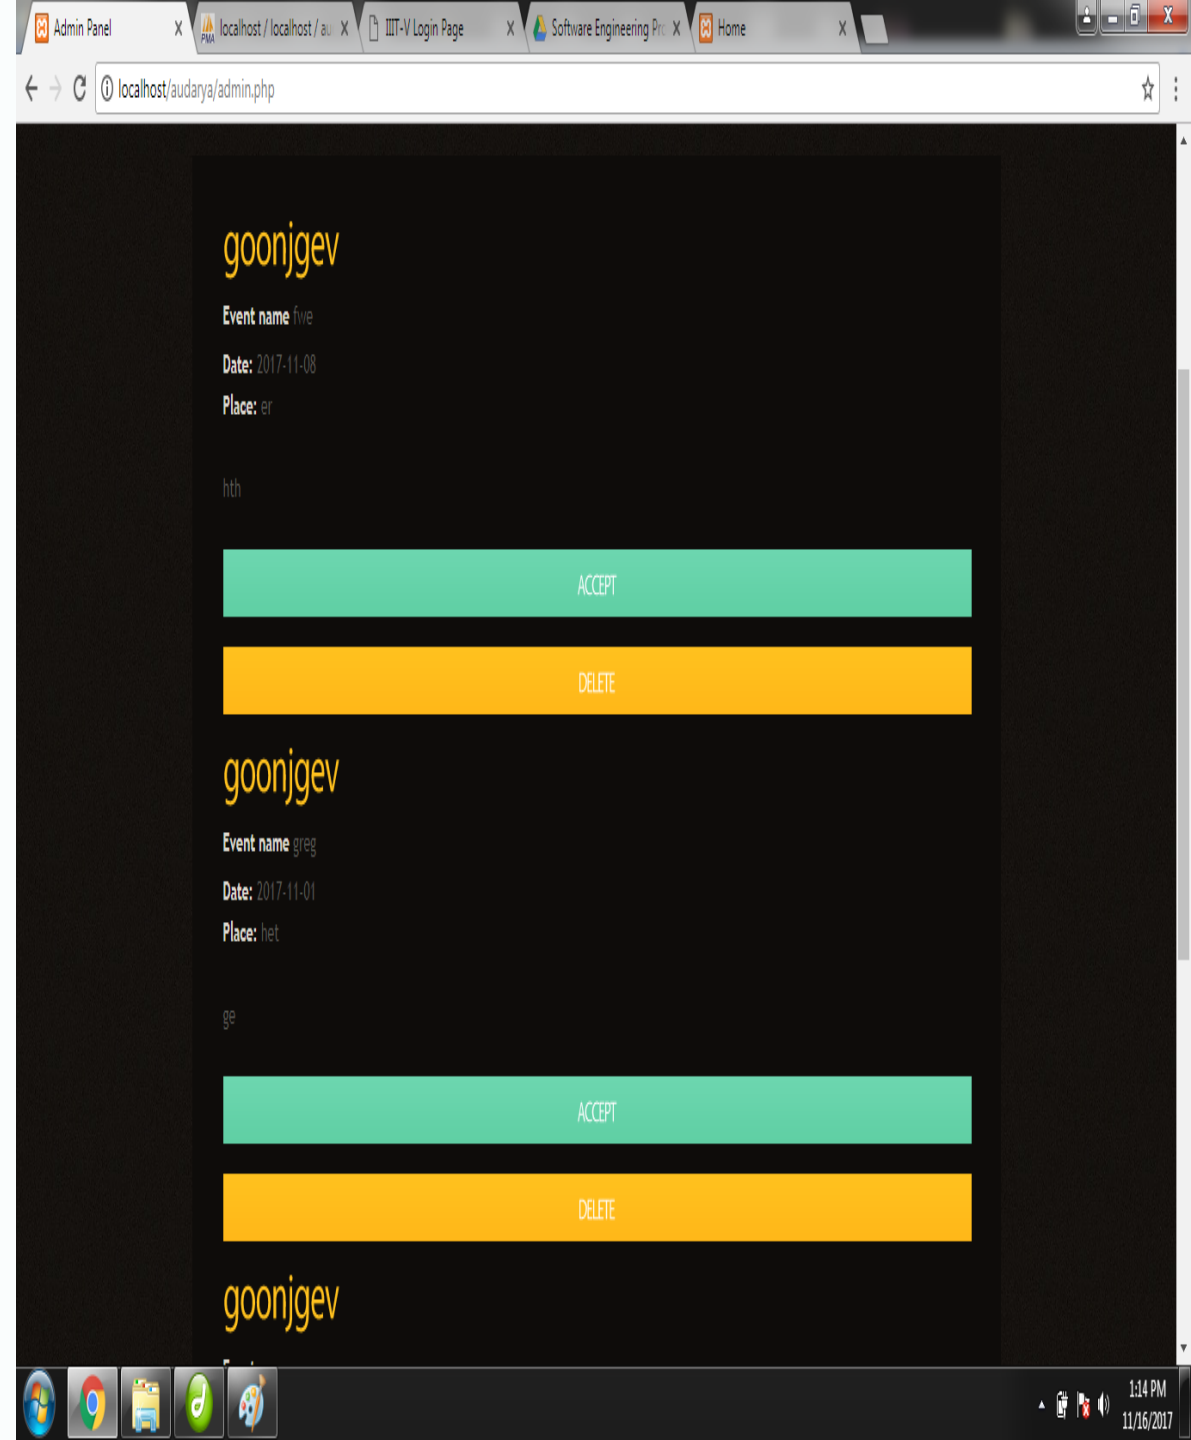

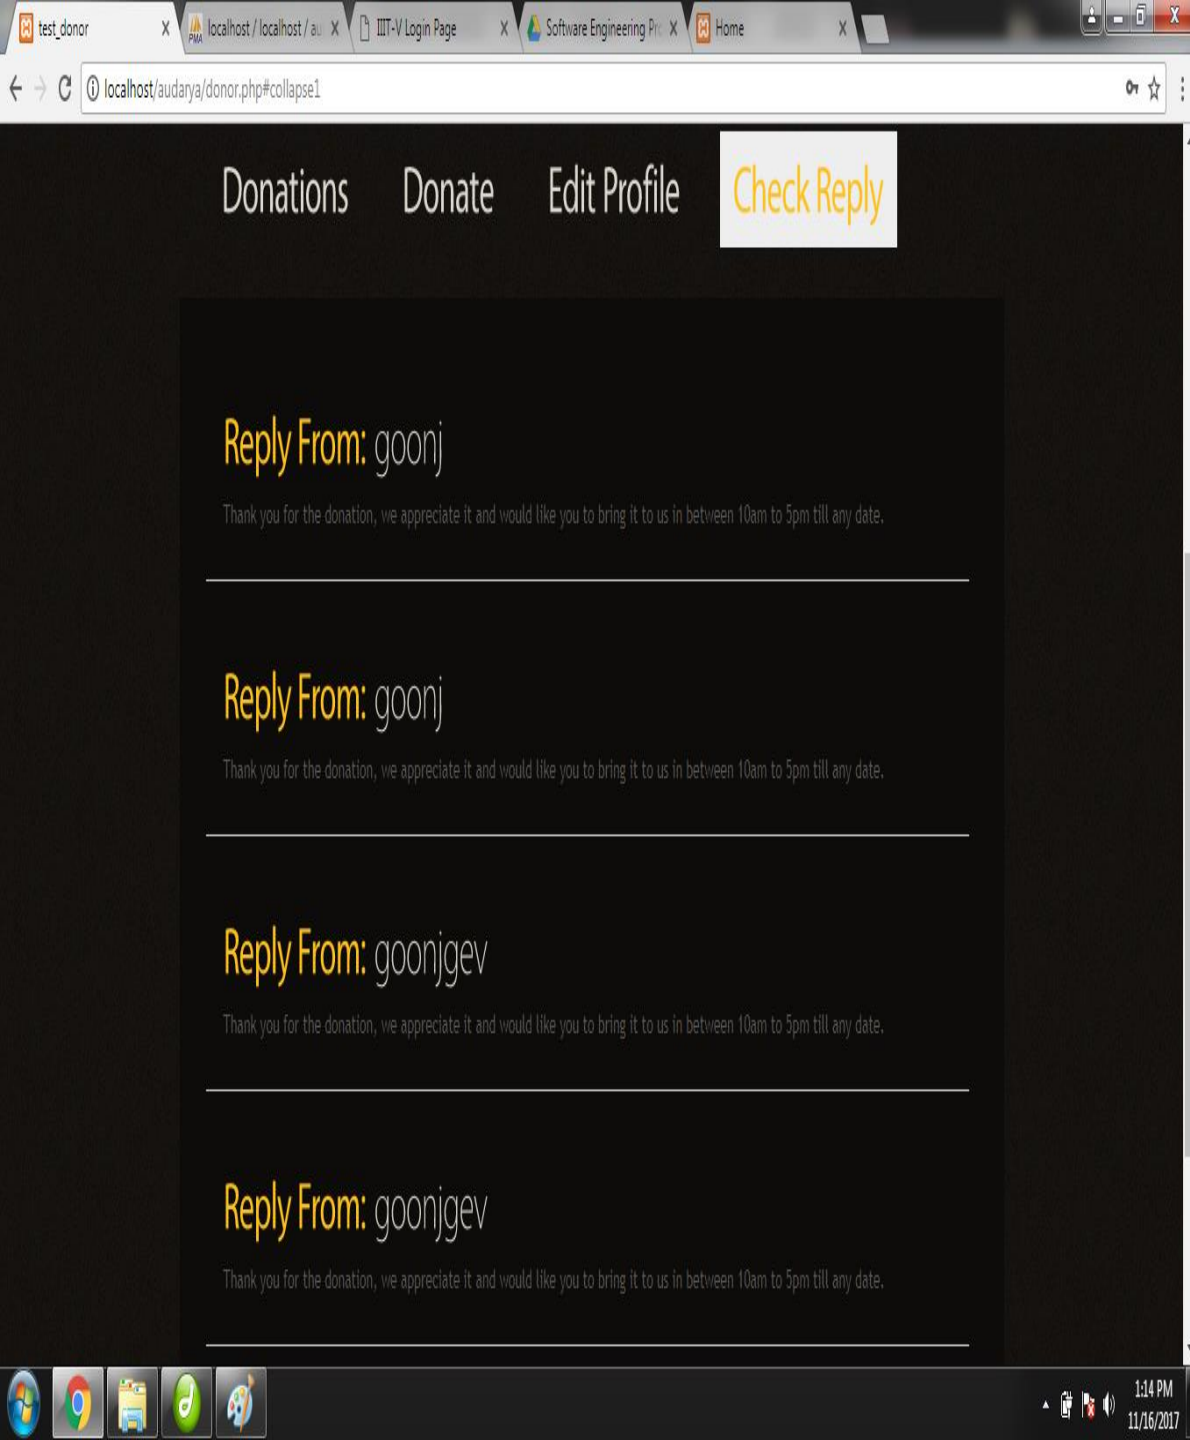

- Organisation search
- List of NGOs sorted by the type of donation
- Separate login for NGOs, individuals and organisations
- Notifications of events organised for noble cause
- News feed
- Achievements section
- Stories of NGO

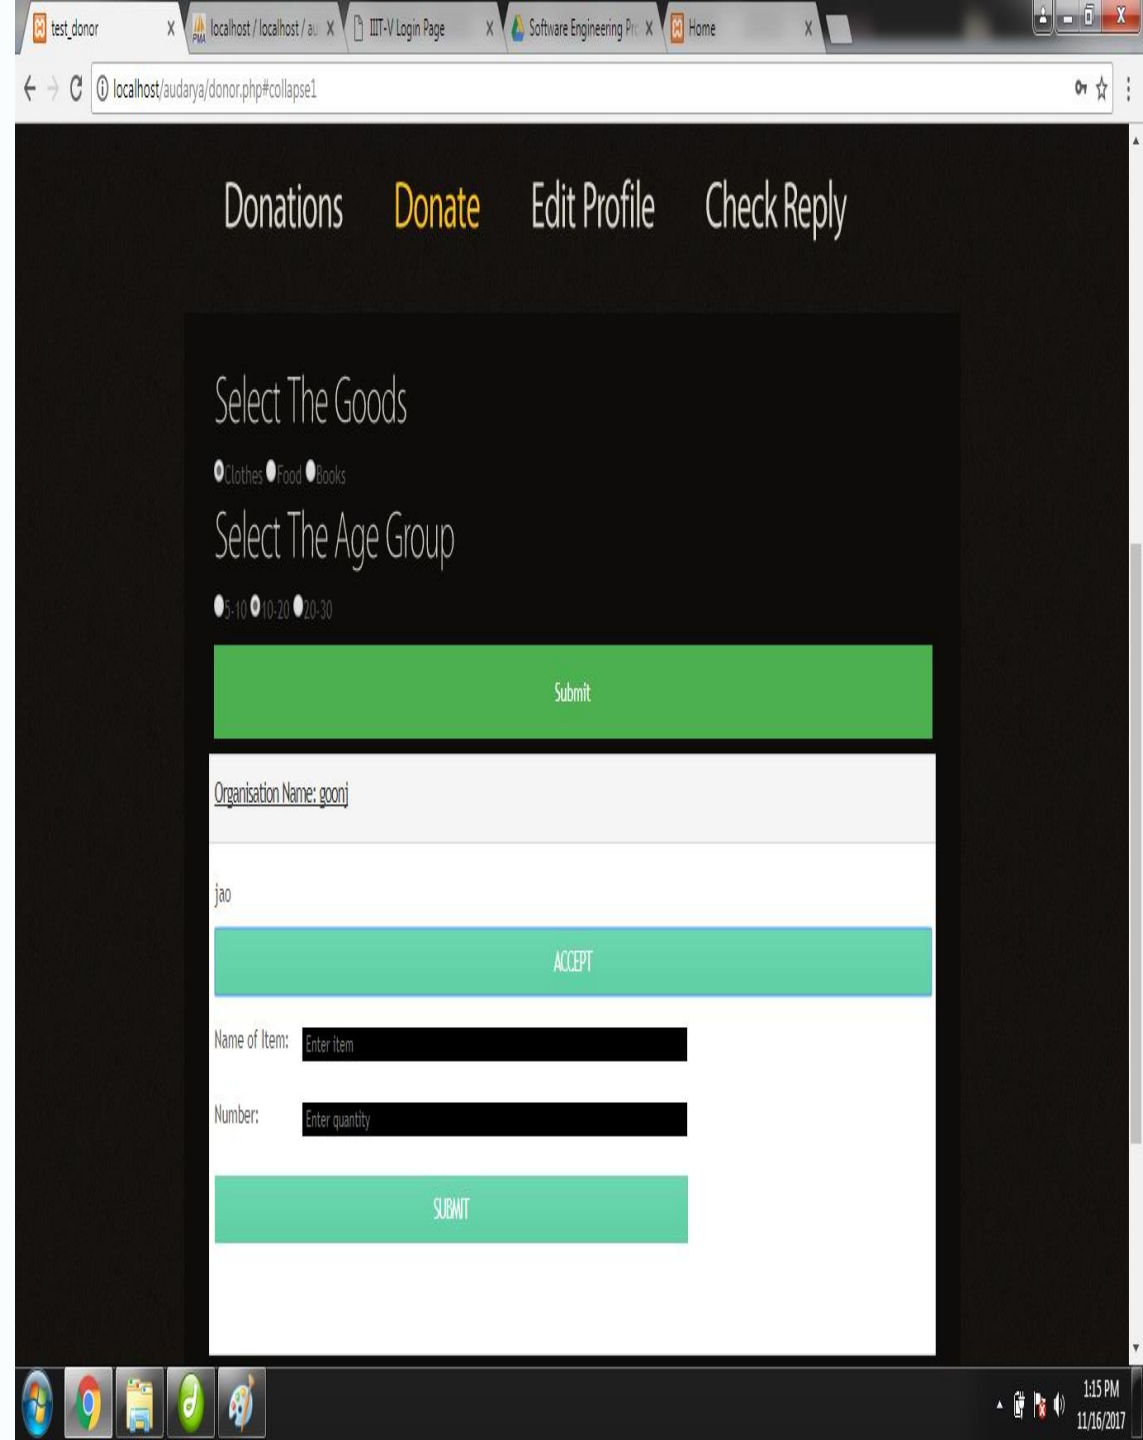

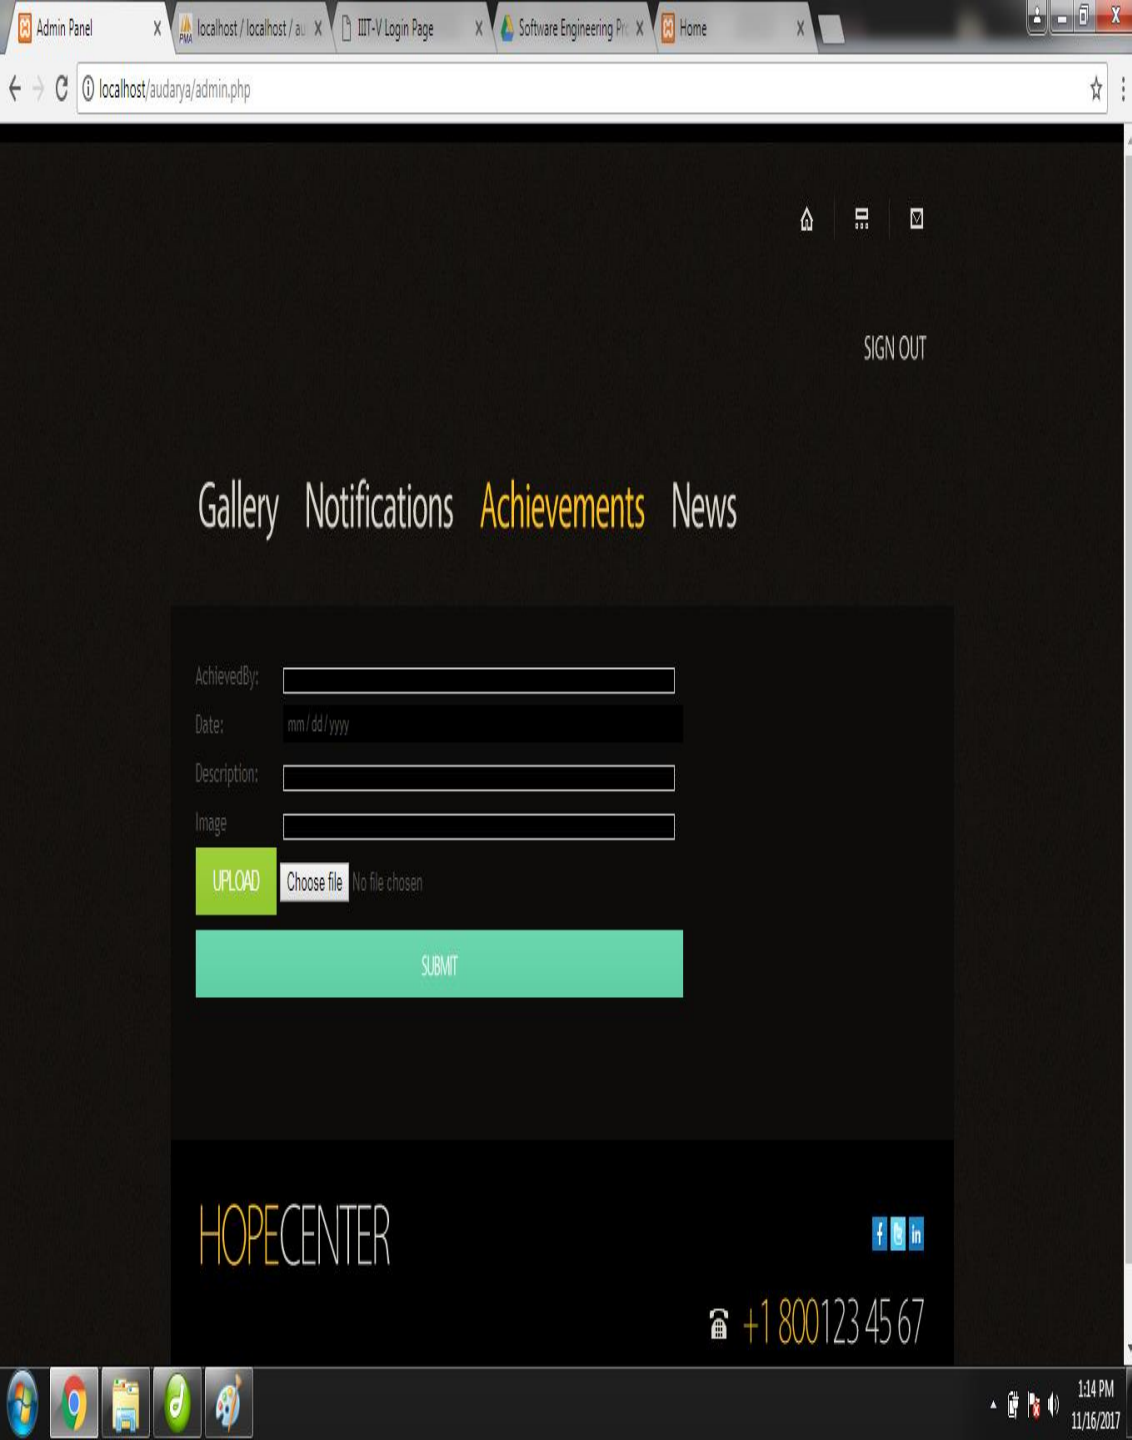

THINGS WE LEARNT

- Working as a team
- Difference between coding alone and as a group
- Importance of documentation
- Importance of meeting deadline
- Importance of consistent motivation and efforts
- Importance of estimation
- A more analytical approach towards handling all the problems, be it software engineering or daily routine.

WHAT ELSE COULD HAVE BEEN DONE

- Blood donation feature
- Feature of adding video lectures
- More concurrency in the work
- Better estimation of time and efforts
- Designing part could have been dealt in a better way
- Last minute work could have been avoided.
